

Tocktify — GROWTH PLAN

Tocktify Growth Plan — June 11 → August 1, 2026

Owner: CEO + 3-person team **Cash budget:** \$500 (boosts + incentives allowed) **Channels:** TikTok (@tocktify.com, ~3.2K followers), YouTube (@Tocktify, ~450 subs), tocktify.com, WhatsApp

1. The honest starting point

Tocktify is a \$39/month B2B SaaS product where every seller needs their own business license and Hormuud merchant account, onboarding is currently concierge (done by hand, twice ever), and true onboarding capacity is unknown.

That means **the bottleneck is not attention — it is onboarding throughput**. TikTok boosts at ~\$9 per 10–20K views can buy almost unlimited Somali attention. What cannot be bought is the team's ability to walk hundreds of sellers through licensing + merchant setup in 7 weeks.

A goal of 10,000 *paying* sellers by Aug 1 would be ~\$390K/month of new revenue from a standing start with manual onboarding. No company has ever done that. Chasing it would burn the budget on vanity reach and produce churn, refunds, and a damaged brand in a small, tight-knit market where reputation is everything.

2. The reframed goal: "10,000 in the funnel"

Keep the number. Change what it counts.

By August 1: 10,000 people inside the Tocktify funnel — followers + WhatsApp community members + waitlist signups — feeding a Founding 100 cohort of paying sellers.

Metric (cumulative, by Aug 1)	Target	Stretch
TikTok + YouTube followers/subs	7,000	12,000
Waitlist signups (name + WhatsApp + what they sell)	2,500	5,000
WhatsApp community members	800	1,500
Qualified applications (want to pay, ready for KYC)	300	600
Onboarded paying sellers ("Founding 100")	100	150
Sellers with ≥1 completed sale	30	60
New MRR	~\$3,900	~\$6,000

Why this is the right target:

- 100 paying, *activated* sellers = 100 success stories = the fuel for the real scale phase (Aug-Dec), exactly how Selar grew in Nigeria — creator success stories and word-of-mouth, not ad spend.
- A 2,500–5,000 person waitlist means demand is **banked, not wasted**. Every person you can't onboard in July is pipeline for August.
- It is achievable with 3 people and \$500. The original goal was not, and a team that misses by 99% loses morale; a team that hits 10,000-in-funnel and 100 paying sellers has a fundable, scalable story.

3. Positioning

One-liner (Somali-first market):

"Dukaankaaga online-ka ah — lacagta ku qaado EVC Plus, eDahab iyo Wallet. Tocktify." ("Your online store — get paid with EVC Plus, eDahab and Wallet.")

The enemy is the DM. Thousands of Somalis already sell on TikTok, Instagram and WhatsApp — taking orders in DMs, chasing payment screenshots, losing track of orders. Tocktify's message is not "start a business" (hard, slow) — it is **"you already have a business; stop running it in your DMs"** (instant recognition). This is the #1 audience: existing social sellers, in Somalia and the diaspora.

Turn the licensing bottleneck into the offer. Don't hide the friction — productize it:

The Founding 100 Program We take you from "I sell in my DMs" to a licensed online business: we walk you through the business license, set up your Hormuud merchant account, build your store with you, and connect EVC Plus/eDahab payouts. Founding price locked for life + 2 free months on annual. **Only 100 places. Apply now.**

The scarcity is *real* (it's your actual capacity), which makes it honest marketing and creates urgency. "Done-with-you licensing" converts the platform's biggest weakness into its most defensible moat — Shopify will never get a seller a Hormuud merchant account.

Diaspora wedge — "Buy from Minneapolis, deliver in Mogadishu." The diaspora plays three roles: (a) sellers selling into Somalia, (b) **buyers** — order a Banana Bully cake for your mother in Mogadishu, pay by card/wallet from abroad, and (c) referrers — "your aunt's tailoring shop should be on Tocktify." Role (b) is the killer content angle: every diaspora-buys-for-family video markets the buyer side AND proves the seller side works. Target geos for boosts: Minneapolis/St. Paul, London, Toronto, Nairobi (Eastleigh), Stockholm, Columbus OH.

4. The funnel

WhatsApp is the CRM. No paid tools. WhatsApp Business app (free): labels for funnel stage (Lead → Applied → KYC → Live → Selling), catalog feature for the lead magnet, broadcast lists for the drip. Every waitlist signup gets a personal WhatsApp message within 24h — at this scale, founders doing manual outreach IS the growth engine (it's how every B2B SaaS starts).

5. Product changes that are marketing (you own the code)

Priority-ordered; items 1-3 should ship in week 1-2:

1. **Public waitlist page with viral referral** — after signing up you get a share link; 3 referrals = jump the queue / first month 50% off. Viral waitlists routinely produce 1.5-3 signups per organic signup.
2. **Demo store mode (sandbox)** — let anyone build a store and share it *before* KYC/license, with payments disabled ("Activate payments" = Founding 100 application). This decouples the viral loop from the licensing bottleneck — thousands can experience the

- product while only 100 go through full onboarding. **This is the single highest-leverage change.** It also makes the debated \$2 trial work: charge the \$2 as a "setup deposit" credited to the first month, but don't gate the demo store on KYC.
3. **Fix tocktify.com's web presence** — the site currently returns 403 to crawlers (check Vercel/WAF bot rules): that blocks Google indexing and link previews on WhatsApp/TikTok. Add OpenGraph tags, Somali+English meta descriptions, and links to TikTok/YouTube. When someone hears "Tocktify" in a video and Googles it, they must find you.
 4. **Public storefronts as living demos** — Ahmed's and Sahel's stores linked from every video description ("dukaankan wuxuu ku shaqeeyaa Tocktify" / "this store runs on Tocktify" badge with referral link).
 5. **Referral program in-product** — 1 free month per paying referral, both sides. In a community this tight, referral will outperform every ad.

6. Budget: \$500

Line	Amount	Detail
TikTok boosts	\$280	Boost only proven winners: post organic, wait 24–48h, boost the top ~⅓ at \$1–2/day × 6–7 days. Always boost videos with a CTA (waitlist/Founding 100), seller stories, and the diaspora-buys-for-family angle. Split geo: Somalia-reachable audiences + diaspora cities. ≈ 500K–900K targeted views.
YouTube promotion	\$60	Push documentary parts 2–4 to East Africa + diaspora geos (KE/UG/TZ + US/UK/CA, since Somalia can't be targeted directly).
Founding 100 incentives	\$100	Funds the "2 free months on annual" and referral free-months (costed as service credit, low real cash cost) + one giveaway: free year of Tocktify for the best "what I'd sell" video stitch — a UGC engine that costs 300/ <i>list</i> 0 cash.
Reserve	\$60	Double down in week 6–7 on whatever has the best cost-per-waitlist-signup.

Decision rule: track *cost per waitlist signup* per boosted video weekly. Kill anything above \$0.50/signup; reallocate to anything below \$0.20.

7. Podcast? Verdict: not yet — do a weekly live show instead

- A produced podcast is the wrong tool right now: high effort, slow audience build, no native distribution. Instead run "**Suuq Live**" — a weekly 45–60 min TikTok Live (simulcast/re-upload to YouTube), Somali-language, every Thursday 8:30pm EAT (catches Somalia evening + diaspora lunchtime US):
- Format: 10 min platform news/demo → 20 min guest seller (start with Ahmed, Sahel, then each new Founding 100 seller) → 20 min open Q&A → CTA.
 - Each live yields **3–5 clipped shorts** for the daily content quota.
 - TikTok Live also drives follows aggressively via the For You feed.
 - Revisit a real podcast after August, when you have 20+ seller stories; the live show's recordings become its back-catalog.

8. Team allocation (3 people + CEO)

Role	Owner	Load
Content (shoot/edit 2 posts/day, clips, doc series)	Employee A	full-time
Community + funnel (WhatsApp, waitlist follow-up, comments — reply to EVERY comment, many as video replies)	Employee B	full-time
Onboarding + seller success (Founding 100 pipeline, licensing SOP, activation to first sale)	Employee C	full-time
Suuq Live host, partnerships, boost decisions, weekly metrics	CEO	recurring

Week 1 critical task for Employee C: onboard 3 sellers end-to-end and *time every step*. You cannot plan capacity you haven't measured. Write the SOP (checklist: license → Hormuud merchant → SMS gateway → store → test payment) as you go; the SOP becomes both your operations manual and a tutorial content series.

9. KPIs — review every Monday

Weekly scorecard (one row per week): TikTok views / new followers / YouTube subs / waitlist adds / WhatsApp members / applications / sellers onboarded / sellers with a sale / MRR / \$ spent / cost per waitlist signup.

Leading indicator that matters most: **waitlist adds per week**. If that's on pace ($\approx 350/\text{wk}$ average), the Aug 1 goal lands.

10. Risks

- **Onboarding slower than hoped** → the waitlist banks the demand; shrink "Founding 100" to "Founding 50" publicly only if week-3 data forces it (under-promise beats missing).
- **Licensing/Hormuud delays outside your control** → demo store mode keeps momentum; sellers wait *inside* the product, not outside it.
- **Boost fatigue / falling CPMs efficiency** → the decision rule in §6; organic + referral should overtake paid by week 4.
- **Two-seller proof is thin** → that's *why* the Founding 100 are onboarded concierge-style: each one must succeed and become content.
