

Tocktify — SESSION BRIEF

Tocktify — Session Handoff Brief

Date: June 11, 2026 · **From:** Claude Code (cloud session) · **For:** continuation on CEO's laptop **Branch with all work:**

claude/tocktify-marketing-growth-xeeldj on idbac25/Bayzara

How to continue this work on the laptop

```
git fetch origin claude/tocktify-marketing-growth-xeeldj
git checkout claude/tocktify-marketing-growth-xeeldj
```

Then start Claude Code in the repo and open with a prompt like:

"Read everything in the marketing/ folder, starting with SESSION-BRIEF.md — it's the handoff from a previous session where we built Tocktify's growth plan to August 1. Continue from the open items in section 6."

Everything below is also in that folder; this brief exists so no context from the conversation is lost.

1. The company and the situation

- **Tocktify (tocktify.com)** — "Shopify for Somalia/East Africa." SaaS platform where entrepreneurs upload products, create social tracking links, capture payments online, and get paid out automatically every 24 hours.
- **Paypoint** — the company's own payment gateway, aggregating Somali mobile money (EVC Plus, eDahab, wallets), serving the unbanked.
- **Team:** CEO + 3 employees. **Marketing budget: \$500 to Aug 1.**
- **Goal as stated:** 10,000 users by August 1, 2026.
- **Channels:** TikTok @tocktify.com (~3,177 followers, 8,161 likes, bio "Post Get paid. Sell on TikTok. Get paid via EVC, eDahab and Wallet"); YouTube @Tocktify (~448 subs, 4 videos, 7 days old, ~£15 spent on boosts; subs mostly Kenya/Uganda/Tanzania + US diaspora — Somalia cannot be targeted by YouTube/TikTok ads, only boost spillover).
- **Live sellers (2):** Ahmed "Banana Bully" (online bakery/cakes) and Sahel Drops (grocery). A 4-part documentary exists; Part 1 is live on YouTube ("The Last Winter", ~1.2K views) with an English version.
- **Boost economics:** TikTok ~9 → 10–20K views(1/day × 6–7 days); YouTube boosts also available and cheap.
- **The repo (Bayzara)** is the product codebase: Next.js + Supabase, EN/SO localization, shop features, SMS recorder backend + Android APK (payment-SMS ingestion), Vercel deploy. The team controls the product and can ship growth features.

2. Facts the CEO confirmed in Q&A (load-bearing for the strategy)

1. **Goal metric:** "10,000" is not strictly defined — CEO accepted a recommendation (see §3).
2. **Onboarding:** currently **concierge** (manual, done twice ever). Founders are debating self-signup + **\$2 seven-day trial**.
3. **Pricing:** \$39/month, \$170/6 months, \$300/year.
4. **KYC reality:** every seller needs their **own business license and own Hormuud merchant account** (plus SMS gateway connection) — no master-merchant aggregation. This is the growth bottleneck.
5. **Capacity:** unknown — never measured. (Week-0 task: onboard 3 sellers with a stopwatch.)
6. **Target sellers:** existing social/DM sellers + Somali diaspora + Somalia-based sellers (all three).
7. **Budget flexibility:** \$500 can fund boosts AND incentives (free

- months, referral rewards, giveaways).
8. **Content capacity:** daily content possible (team of 3).
 9. **Ahmed & Sahel:** will appear in content but will NOT share revenue numbers publicly (use order counts, not dollar figures).

3. Strategy decided (full detail in GROWTH-PLAN.md)

- **Core insight:** the bottleneck is onboarding throughput, not attention. 10,000 *paying* sellers in 7 weeks (~\$390K MRR) is impossible; chasing it would burn budget and reputation.
- **Reframed goal:** *10,000 people in the funnel* (followers + waitlist
 - WhatsApp community) feeding a "**Founding 100**" cohort of paying, concierge-onboarded sellers. Targets: 2,500+ waitlist, 100 paying sellers, 30 with first sale (~\$3,900 MRR) by Aug 1.
- **Positioning:** "The enemy is the DM" — target people already selling via TikTok/WhatsApp DMs and payment screenshots. Don't teach a new behavior; remove friction from an existing one.
- **The bottleneck becomes the offer:** Founding 100 = done-with-you licensing + Hormuud merchant setup + store build, founding price locked, only 100 places (real scarcity, honest urgency).
- **Diaspora wedge:** "Order in Minneapolis, deliver in Mogadishu." Diaspora = buyers + sponsors ("\$300/year for your family's store") + referrers; also the only ad-targetable segment (Minneapolis, London, Toronto, Eastleigh, Stockholm, Columbus).
- **Podcast verdict:** no standalone podcast yet. Weekly "**Suuq Live**" TikTok Live (Thu 8:30pm EAT, re-upped to YouTube), seller guest each week, clipped into 3–5 shorts. Revisit podcast after August.
- **\$2 trial decision:** ship it as a "setup deposit credited to month one" — but never gate the demo store on it.
- **Budget split:** 280 *TikTokboosts(winneronly; kill>0.50* per waitlist signup, scale <\$0.20) · \$60 YouTube (doc parts to East Africa + diaspora) · \$100 incentives (incl. "free year for best 'what I'd sell' stitch" UGC giveaway) · \$60 reserve.
- **Product asks (priority order):** ① viral waitlist page with referral queue-jumping ② **demo store / sandbox mode** (build & share a store pre-KYC; "activate payments" = Founding 100 application) — single highest-leverage build ③ fix tocktify.com returning **403 to crawlers** (breaks Google + WhatsApp/TikTok link previews; check Vercel/WAF bot rules) + OpenGraph tags ④ "runs on Tocktify" badges on Ahmed/Sahel storefronts ⑤ in-product referral: 1 free month per paying referral, both sides.

4. Market facts the plan is built on (full detail in MARKET-CONTEXT.md)

~9% of Somalis have bank accounts but ~89% used mobile money in 2023 (~73% penetration); ~155M transactions/~2.7Bpermonth, USD — *denominated, SMS*

— *confirmed. Walletsbyterritory: EVCPlus(Hormuud,south|central), eDahab(Dahabshii|,nationwide), Zaad(Telesom,Somaliland), Saha(Golis,Puntland). NoStripe/PayPal/ShopifyPaymentsinSomalia*

— *walletaggregationisthemoat. Remittances 1.6–2B/yr (~25% of GDP, 4th most remittance-dependent country; ~200–300/monthperreceivinghousehold). GDP/capita 450 → \$39/mo must be sold as ROI, annual as a diaspora product, \$2 trial fits prepaid top-up culture. Median age ~17; women dominate small trade; WhatsApp >> email; Somali-first content with EN subs. 2025: national instant payments (SIPS/SOMQR) launched — tailwind. **Never run "get rich online" framing** in this scam-aware market; the payout-SMS-on-camera video is the strongest trust asset.*

5. Deliverables already on the branch

([marketing/](#))

File	Contents
GROWTH-PLAN.md / .pdf	Strategy, funnel, goal reframe, budget, team allocation, KPIs, risks
MARKET-CONTEXT.md / .pdf	Somalia fintech deep-dive; every fact tied to a marketing decision
CONTENT-PLAYBOOK.md / .pdf	Pillars + weekly mix, 10 ready-to-shoot scripts (S1-S10, Somali+English) , YouTube plan, Suuq Live rundown, boost playbook, zero-cost distribution

WEEK-BY-WEEK.md / .pdf	Dated calendar Jun 11 → Aug 1: weekly themes, posts, boosts, spend, targets; Monday scorecard template
SESSION-BRIEF.md / .pdf	This handoff document

6. Open items / where to pick up

1. **CEO is reviewing the four documents** — feedback was promised but NOT yet given. First action in the new session: collect and apply it.
2. **Week-0 checklist is live now** (see WEEK-BY-WEEK.md): waitlist page, 403/OpenGraph fix, WhatsApp Business setup, free-guide PDF v1, and the timed onboarding of 3 sellers (capacity number decides if "Founding 100" stays 100).
3. **Offered but not yet done:** waitlist landing-page copy (Somali + English); engineering spec for demo-store mode + referral system against this codebase. Both are natural next tasks for the laptop session, which has the full codebase locally.
4. **Founder decisions pending:** final go/no-go on \$2 trial framing and self-signup; confirm Founding 100 pricing lock details.
5. Documentary Parts 2-4 release dates are set as the next three Fridays in the calendar — confirm the edit schedule supports that.
